

Internet Fraud Solutions (IFS)

Save Resources and Protect Customer Confidence with our comprehensive Anti-Phishing and Anti-Pharming Service

Powered by RSA Security

Protect Your Online Users

Metavante is pleased to offer you an established, proven, end-to-end anti-phishing/anti-pharming service in partnership with RSA Security.

Our tiered Internet Fraud Solutions are specifically designed to meet the unique needs of financial institutions, which can assist you in preparing for and preventing an attack before it occurs, responding immediately when an attack is detected, and addressing some of the issues that arise following an attack.

Stop Attacks in Their Tracks

An attack could cost in excess of \$30,000 in administrative overhead per attack, according to the Anti-Phishing Working Group. Phishers can net around \$100,000 per attack and the number of attacks continues to rise.

With our Internet Fraud Solutions and the support of RSA, Metavante clients' phishing-related fraud losses have been reduced by 50 percent. In addition, RSA's 24/7 Anti-Fraud Command Center (AFCC) has shortened the lifespan of a typical phishing site from an average of 155 hours (6.4 days) to five hours (155 hours is the average cited by the Anti-Phishing Working Group).

Why Choose Metavante?

- The solution's proven success with some of the world's leading financial institutions
- Our Internet Fraud Solutions lower the lifespan of attacks to an average of five hours

- Minimal bank resources are required for addressing attacks
- Our end-to-end solution provides resources to mitigate the likelihood of an attack and minimize the impact
- Tiered solution meets your business needs, whatever they are
- International and multi-lingual protection network
- 24/7 support, monitoring, and shutdown servicing

Plan Your Attack on Fraud

- Realtime Alert and Detection Services – Using our wide array of probes and brand monitoring, Metavante provides realtime detection and alerts of attacks, including scanning more than one billion e-mails per day, as well as domain names and chat rooms. This allows us to identify an attack immediately, as it's taking place, and take immediate action.
- Reporting Services – Immediately upon detection of an attack, using pre-defined statistics, models, and utilities, RSA's AFCC evaluates the attack. This detailed risk assessment provides you with valuable and timely information, equipping you to make an informed, quick decision.
- Exclusive Site Blocking Network – Working with AOL, Netscape, EarthLink, and our other partner solutions, we ensure that more than 50 million users will be prevented from accessing any detected phishing sites, minimizing any losses.
- Site Shutdown – Upon detection, RSA's AFCC contacts ISPs and works with them to shut down the identified fraudulent Web sites. We work on your

behalf to stop the attack and reduce your required resources

- **Forensic Work** – To assist you in reducing the damages from phishing, we conduct forensic investigation work during and following an attack, and attempt to extract usable information from the sites. In many cases, we have captured information on compromised personal information, as well as other information invaluable to you in protecting your information security.
- **Counter-Measures** – Unique, patent-pending tools help reduce the risk of an attack, minimize its impact, and also deter fraudsters from future attacks.

Contact Us

Let Metavante and RSA help you demonstrate that your institution has a proactive approach to protecting your on-line users. To learn more, please call 1-800-822-6758 or visit metavante.com.
